

# Modernization Kit ASSA ABLOY M Operator on manual overhead sectional doors

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in  
door opening solutions

## Upgrade your manual door with a CDM9 operator

### Key Benefit

Convenience

Safety

### Increased convenience

When traffic intensity increases or when more operating comfort is desired, manually operated doors can be upgraded with an ASSA ABLOY CDM9 operator.

ASSA ABLOY offers a wide range of operators, control units and additional electronic equipment to operate the door efficiently and safely. For example the economic 920 control unit only works with hold-to-run closing, while the 950 control unit allows all possible automation, such as radars, remote controls and traffic lights.

### Machine directive

Upgrading a manual door to a power-operated door means we turn it into a machine. This requires the door to be in compliance with additional EU regulations regarding operating safety.

Our service engineers have the skills and certificates required to upgrade the door conform these regulations. After the upgrade you will receive these certificates for local authorities. More importantly, this will assure you trouble-free operation of the door.

## Available kits for ASSA ABLOY M Operator

Name	Track types	Operation	Contents of kit
ASSA ABLOY M Operator VL 920	VL and HL>600	Hold-to-run closing	CDM9 Operator and 920 control unit
ASSA ABLOY M Operator LL 920	LL	Hold-to-run closing	CDM9 Operator, 920 control unit and 2x safety pull set
